			Lan Vinh AU 1765	

U.S. Patent and Trademark Office PTOL-303 (Rev. 11-03) Continuation of 5. does NOT place the application in condition for allowance because: Applicants argue that the 102(e) rejection against claim 12 is improper because the Winiczek fails to disclose the limitation of detecting a change of the voltage prior to the comletion of the etching of the target layer of material since Winniczek discloses a method in which the end of the etch process triggers the detection. This argument id unpersuasive because while it is true that Winniczek discloses that "the end of the etch is typically evidenced by a clearly discernible change in the compensation voltage, it is also true that Fig. 3 of Winniczek clearly shows a change of the compensation voltage prior to the end of the etch in region 304, which reads on the claimed step of detecting a change of the voltage prior to the completion of the etching of the target layer of material. Thus, the examiner asserts that the 102(e) rejection against claim 12 is proper.
